

# HOW TO GET STARTED..

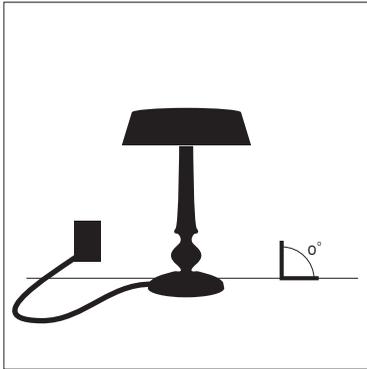

## SILHOUETTE

### WHAT'S IN THE BOX:

- Upper part lampshade
- Lower part lampshade / base including cord with touchpad
- Power Adapter
- User Manual

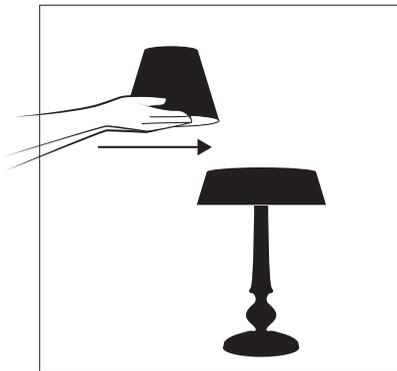

#### STEP 1:

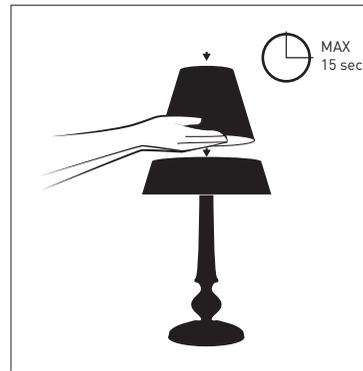

The lamp base should be mounted horizontally on a flat and sturdy surface, preferred accuracy better than 1°. Plug in the power supply.

#### STEP 2:

Rest the upper part lampshade in both hands. Keep it lightly balanced on your finger tips.

#### STEP 3:

At the bottom of the upper part lampshade, you can see a reflective spot.

Aim the reflective spot over the sensor, 3-4 cm directly above it. You should now feel the repelling action of the magnets.

If this step takes longer than 15 seconds start again from step 2.

#### STEP 4:

When placed correctly you will feel the upper part lampshade lock itself into position.

Carefully let go of the upper part lampshade. Now it should be floating!
